**Write a C program to accept three digit number and display sum of digits.
like 123=6**

```
void main()
{
    int n,m,digit=0;
    clrscr();
    printf("\n Enter any three digit number ");           Debug
    scanf("%d",&n);                                       123

    m=n%10;                                               3
    n=n/10;                                               12
    digit=digit+m;                                       0+3   3

    m=n%10;                                               2
    n=n/10;                                               1
    digit=digit+m;                                       3+2   5

    m=n%10;                                               1
    digit=digit+m;                                       5+1

    6

    printf("\n Sum of digit No. %d",digit);             6
    getch();
}
```
