Write a C program given number is palindrome or not palindrome.

```
void main()
{
    int n,m,rev=0,s;
    clrscr();
    printf("\n Enter any three digit number ");           Debug
    scanf("%d",&n);                                       123
    s=n;

    m=n%10;                                               3
    n=n/10;                                               12
    rev=rev*10+m;                                         0+3   3

    m=n%10;                                               2
    n=n/10;                                               1
    rev=rev*10+m;                                         30+2  32

    m=n%10;                                               1
    rev=rev*10+m;                                         320+1 321

    if(s==rev)
    {
        printf("\n Palindrome number ");
    }
    else
    {
        printf("\n Not Palindrome number ");
    }
    getch();
}
```
