AWT & SWING

1. Creating a frame:

```
package awt; // awt is package name you can change it
```

```
import javax.swing.*;
public class FrameExample1
{
    public static void main(String args[])
    {
        JFrame f = new JFrame("Frame Example 1");
        f.setSize(400, 300);
        f.show();
    }
}
```

Output:

2. HelloWorldSwing:

```
package awt;
import javax.swing.*;
public class HelloWorldSwing {
    public static void main(String[] args) {
        JFrame frame = new JFrame("HelloWorldSwing");
        final JLabel label = new JLabel("Hello World");
        frame.getContentPane().add(label);
        frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
    }
}
```

All Online Learning

www.allonlinelearning.com

```
        frame.pack();
        frame.setVisible(true);
    }
}
```

Output:

3. Event Example : No of button click

```
package awt;
import java.awt.event.ActionEvent;
import java.awt.event.ActionListener;
import javax.swing.JButton;
import javax.swing.JFrame;
import javax.swing.JLabel;
import javax.swing.JPanel;
public class SwingApplication extends JFrame {
    private static String labelPrefix = "Number of button clicks: ";
    private int numClicks = 0;
    JLabel label = new JLabel(labelPrefix + "0 ");
    public SwingApplication(String title) {
        super(title);
        JButton button = new JButton("I'm a Swing button!");
        button.addActionListener(new ActionListener() {
            public void actionPerformed(ActionEvent e) {
                label.setText(labelPrefix + ++numClicks);
            }
        });
        JPanel panel = new JPanel();
        panel.add(button);
        panel.add(label);
        getContentPane().add(panel);
        pack();
        setVisible(true);
    }
    public static void main(String[] args) {
        new SwingApplication("SwingApplication");
    }
}
```

Output:

All Online Learning

www.allonlinelearning.com

4. Implement an Event Handler:

```
package awt;
```

```
import java.awt.Color;
import java.awt.event.ActionEvent;
import java.awt.event.ActionListener;
import javax.swing.JButton;
import javax.swing.JFrame;
```

```
public class ButtonClickExample extends JFrame implements
ActionListener {
    JButton b = new JButton("Click me!");
    public ButtonClickExample() {
        b.addActionListener(this);
        getContentPane().add(b);
        pack();
        setVisible(true);
    }
    public void actionPerformed(ActionEvent e) {
        b.setBackground(Color.CYAN);
    }
    public static void main(String[] args) {
        new ButtonClickExample();
    }
}
```

Output:

All Online Learning

www.allonlinelearning.com

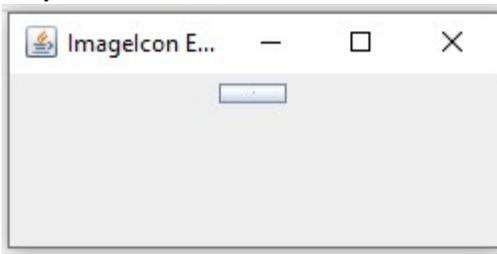

5. Image Icon:

```
package awt;
```

```
import javax.swing.*;
public class ImageIconExample extends JFrame {
    public static void main(String[] args) {
        JFrame frame = new JFrame("ImageIcon Example");
        ImageIcon icon = new ImageIcon("smallfrog.jpg");
        JPanel panel = new JPanel();
        JButton button = new JButton(icon);
        panel.add(button);
        frame.getContentPane().add(panel);
        frame.pack();
        frame.setVisible(true);
    }
}
```

Output:

6. JTextField Example: CelsiusConverter

```
package awt;
import java.awt.BorderLayout;
import java.awt.GridLayout;
import java.awt.event.ActionEvent;
import java.awt.event.ActionListener;
import javax.swing.JButton;
import javax.swing.JFrame;
import javax.swing.JLabel;
import javax.swing.JPanel;
import javax.swing.JTextField;
import javax.swing.SwingConstants;
import javax.swing.UIManager;
public class CelsiusConverter implements ActionListener {
    JFrame converterFrame;
    JPanel converterPanel;
```

All Online Learning

www.allonlinelearning.com

```

    JTextField tempCelsius;
    JLabel celsiusLabel, fahrenheitLabel;
    JButton convertTemp;
    public CelsiusConverter() {
        converterFrame = new JFrame("Convert Celsius to Fahrenheit");
        converterPanel = new JPanel();
        converterPanel.setLayout(new GridLayout(2, 2));
        addWidgets();
        converterFrame.getContentPane().add(converterPanel, BorderLayout.CENTER);
        converterFrame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
        converterFrame.pack();
        converterFrame.setVisible(true);
    }
    private void addWidgets() {
        tempCelsius = new JTextField(2);
        celsiusLabel = new JLabel("Celsius", SwingConstants.LEFT);
        convertTemp = new JButton("Convert...");
        fahrenheitLabel = new JLabel("Fahrenheit", SwingConstants.LEFT);
        convertTemp.addActionListener(this);
        converterPanel.add(tempCelsius);
        converterPanel.add(celsiusLabel);
        converterPanel.add(convertTemp);
        converterPanel.add(fahrenheitLabel);
    }
    public void actionPerformed(ActionEvent event) {
        int tempFahr = (int)((Double.parseDouble(
            tempCelsius.getText())) * 1.8 + 32);
        fahrenheitLabel.setText(tempFahr + " Fahrenheit");
    }

    public static void main(String[] args) {
        try {
            UIManager.setLookAndFeel(UIManager.getCrossPlatformLookAndFeelClassName());
        } catch (Exception e) {}

        CelsiusConverter converter = new CelsiusConverter();
    }
} // end CelciusConverter class
```

Output:

All Online Learning

www.allonlinelearning.com

7. JCheckBox Example:

```
package awt;
```

```
import java.awt.GridLayout;  
import java.awt.event.ActionEvent;  
import java.awt.event.ActionListener;  
import javax.swing.JButton;  
import javax.swing.JCheckBox;  
import javax.swing.JFrame;  
import javax.swing.JPanel;
```

```
public class CheckBoxDemo extends JPanel implements ActionListener {  
    JCheckBox chinButton;  
    JCheckBox glassesButton;  
    JCheckBox hairButton;  
    JCheckBox teethButton;  
    JButton goButton = new JButton("Go!");
```

```
    public CheckBoxDemo() {  
        chinButton = new JCheckBox("Chin");  
        chinButton.setSelected(true);  
        glassesButton = new JCheckBox("Glasses");  
        glassesButton.setSelected(true);  
        hairButton = new JCheckBox("Hair");  
        hairButton.setSelected(true);  
        teethButton = new JCheckBox("Teeth");  
        teethButton.setSelected(true);  
        goButton.addActionListener(this);  
        setLayout(new GridLayout(0, 1));  
        add(chinButton);
```

All Online Learning

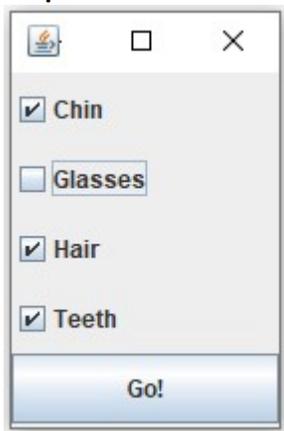

www.allonlinelearning.com

```
add(glassesButton);
add(hairButton);
add(teethButton);
add(goButton);

}
public static void main(String[] args){
    JFrame frame = new JFrame("CheckBoxDemo");
    frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE    );
    frame.getContentPane().add(new CheckBoxDemo());
    frame.pack();
    frame.setVisible(true);
}

public void actionPerformed(ActionEvent e) {
    if (glassesButton.isSelected()) {
        System.out.println("Glasses = true");
    }
    else {
        System.out.println("Glasses = false");
    }
    System.exit(0);
}
}
```

Output:

8. JRadioButton Example:

```
package awt;
```

```
import java.awt.BorderLayout;
```

All Online Learning

www.allonlinelearning.com

```
import java.awt.GridLayout;
import java.awt.event.ActionEvent;
import java.awt.event.ActionListener;
import javax.swing.ButtonGroup;
import javax.swing.JButton;
import javax.swing.JFrame;
import javax.swing.JPanel;
import javax.swing.JRadioButton;

public class RadioButtonDemo extends JPanel implements ActionListener {
    String birdString = "Bird";
    String catString = "Cat";
    String dogString = "Dog";
    String rabbitString = "Rabbit";
    String pigString = "Pig";
    JRadioButton birdButton = new JRadioButton(birdString);
    JRadioButton catButton = new JRadioButton(catString);
    JRadioButton dogButton = new JRadioButton(dogString);
    JRadioButton rabbitButton = new JRadioButton(rabbitString);
    JRadioButton pigButton = new JRadioButton(pigString);
    JButton goButton = new JButton("Go!");

    public RadioButtonDemo() {
        birdButton.setSelected(true);
        ButtonGroup group = new ButtonGroup();
        group.add(birdButton);
        group.add(catButton);
        group.add(dogButton);
        group.add(rabbitButton);
        group.add(pigButton);
        goButton.addActionListener(this);

        setLayout(new GridLayout(0, 1));
        add(birdButton);
